Art Unit: 2665

1. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 4, "intelligent communications platform" should be changed to -- intelligent communications platform (ICP)--.

Claims 3 and 4 appear to be identical duplicate of each other.

In claims 6, 7, 13 and 14, line 1, each occurrence of "the GUI" lacks antecedent basis.

In claim 15, lines 4-5, "intelligent communications platform" should be changed to -- intelligent communications platform (ICP)--.

Claims 17 and 18 appear to be identical duplicate of each other.

In claims 20 and 21, line 2, each occurrence of "the GUI" lacks antecedent basis.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by LEWIS in U.S. Patent No. 6,442,169 or KULT et al. in U.S. Patent No. 6,480,597.

By broadly interpreting the open architecture platform (402) as the claimed intelligent communications platform, and the control servers (510) within the gateway (508) as the claimed

Art Unit: 2665

communications control module, LEWIS discloses a system and method for redirecting data traffic from PSTN to a data network utilizing an intelligent communications platform and a communications control module (see col. 19, line 22 to col. 24, line 57, col. 28, line 26 to col. 29, line 43, and Figures 4-6) as in claims 1-21.

Similarly, by broadly interpreting the intelligent services network (108) as the claimed intelligent communications platform, and the switch controllers (112) within the intelligent services network as the claimed communications control module, KULT et al. also discloses a system and method for redirecting data traffic from PSTN to a data network utilizing an intelligent communications platform and a communications control module (see col. 3, line 52 to col. 6, line 67, and Figures 1-2) as in claims 1-21.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bartholomew et al., Nolting and Kelly et al. are all cited to show the common feature of network traffic planning utilizing intelligent peripheral (or platform) and switching controller similar to the claimed invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpus H. Hsu whose telephone number is (703)305-4377. The examiner can normally be reached on M-F (5:30-3:00) First Friday Off.
